Core Modules

3300 Research Methods for Engineers

| | |
|----------------------------|---|
| Module name: | Research Methods for Engineers |
| Module code: | 3300 |
| Semester: | Winterterm |
| Module coordinator: | Prof. Dr. Andy Stamm |
| Lecturer: | Prof. Dr. W. Megill |
| Language: | English |
| Place in curriculum: | Common Core Subject |
| Timetabled hours: | Lectures: 1 HPW Exercises: 1 HPW Practical Training: 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h report preparation |
| Credits: | 5 |
| Recommended prerequisites: | Basic courses in programming, electronics, engineering design, CAD, and materials. |
| Module objectives: | <p>After completing the course the students have experience of project related work and the practical implementation of their acquired knowledge. They can find relevant information independently using a variety of sources. They can construct useful theories, hypotheses and work statements, then document and present their work in a professional manner. They have also learned the practical side of engineering science with introductions to instrumentation and measurement in real environments. They have learned to design and make their own test rigs and to interpret the data obtained with instrumentation they built and debugged themselves.</p> |
| Content: | <ul style="list-style-type: none"> • Introduction to Engineering Research • Literature Search & Review • Developing a Research Plan • Statistical Design and Analysis • Optimisation Techniques • Design and Construction of Experimental Apparatus • Instrumentation • Amplifier Design and Data Acquisition • Software Control of Experimental Apparatus |

| | |
|-----------------|---|
| | <ul style="list-style-type: none">• Signal in Noise Considerations• Filter Design: Mechanical, Electrical and Software• Numerical Treatment of Experimental Data• Qualitative Research Methods• Report Writing and Presentation• Collaborative Working & Resource Planning; Gantt Charts; Online Collaboration Tools |
| Assessment: | Attestation: continuous assessment |
| Forms of media: | Webex/Moodle |
| Literature: | Lecture notes <ul style="list-style-type: none">- Thiel DV (2014) Research methods for engineers. Cambridge UP. ISBN 978-1-139-54232-6- Horowitz & Hill. The art of electronics. Cambridge UP. ISBN 978-0-521-80926-9 |

3301 Numerical Methods of Simulation

| | | |
|----------------------------|--|-------|
| Module name: | Numerical Methods for Simulation | |
| Module code: | 3301 | |
| Semester: | Winterterm | |
| Module coordinator: | Prof. Dr. Alexander Struck | |
| Lecturer: | Prof. Dr. Alexander Struck Dr. T. Camps | |
| Language: | English | |
| Place in curriculum: | Common Core module | |
| Timetabled hours: | Lectures: | 2 HPW |
| | Exercises: | 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation | |
| Credits: | 5 | |
| Recommended prerequisites: | | |
| Module objectives: | <ul style="list-style-type: none"> • Learning standard concepts of mathematical modelling and computer simulation • Getting an overview of numerical methods for solving algebraic differential and differential-algebraic equations, being able to select, apply and evaluate different numerical algorithms for ordinary and partial differential equations • Developing computer models for small problems and investigating benefits and limitations of the models and their simulation | |
| Content: | <ul style="list-style-type: none"> • If needed, presentation of numbers in a computer: integers and floating point variables; roundoff errors, loss of significant digits, error propagation • Differentials and differential equations by finite differences, transformation to iterative algebraic equations • Iterative solution of linear systems • Iterative solution of non-linear systems, Newton's Method, Newton-Raphson • Integration schemes for ordinary and partial differential equations: forward and backward Eulerpredictor-corrector, Runge-Kutta, implicit vs. explicit schemes • Stability, accuracy and consistency of integration schemes • Fixed-point iteration | |

| | |
|-----------------|--|
| | <ul style="list-style-type: none"> • Numerical Solution in real-time systems • Numerical Computation of Eigenvalues, mathematics for machine learning |
| Assessment: | Graded: Written Exam on Campus (in planning, not fixed, for more information: homepage/moodle) or oral exam |
| Forms of media: | Webex/Moodle |

3302 General Management

| | | |
|----------------------------|--|-------|
| Module name: | General Management | |
| Module code: | 3302 | |
| Semester: | Summerterm | |
| Module coordinator: | Prof. Dr.-Ing. Dirk Untiedt | |
| Lecturer: | Prof. Dr.-Ing. Dirk Untiedt | |
| Language: | English | |
| Place in curriculum: | Core subject | |
| Timetabled hours: | Lectures: | 2 HPW |
| | Practical Training: | 1 HPW |
| Workload: | 45 h attendance 65 h preparation and review 40 h report preparation | |
| Credits: | 5 | |
| Recommended prerequisites: | None | |
| Module objectives: | <p>In addition to the corporate management mostly three management functions for any kind of company can be distinguished with respect to general Management:</p> <ul style="list-style-type: none"> • Marketing Management • Finance Management and • Production management <p>Students know the main tools, methods and instruments of general management. They have the ability to use them effectively. They are able to formulate strategies and implementation plans on all strategy levels and in specific contexts.</p> | |
| Content: | <ul style="list-style-type: none"> • Fundamentals of General Management • Strategy Formulation • Operations • Finance and Controlling • Human Resource Management • Change Management • Marketing and Sales | |
| Assessment: | Attestation: Written reports and oral presentations | |
| Forms of media: | Whiteboard, PowerPoint, Business Simulation Software | |

3400 Structural Analysis

| | |
|----------------------------|---|
| Module name: | Structural Analysis |
| Module code: | 3400 |
| Semester: | Summerterm |
| Module coordinator: | Prof. Dr.-Ing. Henning Schütte |
| Lecturer: | Prof. Dr.-Ing. Henning Schütte |
| Language: | English |
| Place in curriculum: | Core subject |
| Timetabled hours: | Lectures: 2 HPW Exercise: 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation |
| Credits: | 5 |
| Recommended prerequisites: | Advanced Engineering Mathematics, Basic Courses in Statics, Mechanics of Materials and Dynamics |
| Module objectives: | After completing the course the students are able to: <ul style="list-style-type: none"> • reduce the basic set of fundamental equations of continuum mechanics to one and two-dimensional problems • reduce static engineering problems to models of beams, plates and shells with their corresponding boundary conditions and solve them • reduce dynamics engineering problems to vibrations of lumped mass systems and assess their modes, eigenfrequencies and answers to excitations |
| Content: | <ul style="list-style-type: none"> • Stress analysis under general loading conditions • Energy methods in continuum mechanics (Virtual Work, Stability, Menabrea, Castigliano, Method of Virtual Forces) • Modal analysis and forced excitation analysis of lumped mass systems of springs, rods and beams. |
| Assessment: | Graded: Written examination |
| Forms of media: | Whiteboard, PowerPoint, Projector |
| Literature: | Lecture notes <ul style="list-style-type: none"> - Gross, Hauger, Schnell: Engineering Mechanics - Bruhns: Advanced Mechanics of Solids, Springer 2002 - Dresig, Holzweißig: Dynamics of Machinery: Theory and Applications, Springer 2010 |

Focus Field Digital Engineering

3402 Principles of Software Development

| | |
|-----------------------------|---|
| Module name: | Principles of Software Development |
| Module code: | 3402 |
| Courses (where applicable): | |
| Semester: | Summerterm |
| Module coordinator: | Prof. Dr. Ronny Hartanto |
| Lecturer: | Prof. Dr. Ronny Hartanto |
| Language: | English |
| Place in curriculum: | Focus Core subject |
| Timetabled hours: | Principles of Software Development Lectures: 2 HPW Practical: 1 HPW |
| Workload: | 45 h attendance 45 h preparation and review 30 h homework and lab review 30 h exam preparation |
| Credits: | 5 |
| Recommended prerequisites: | Good knowledge in programming (C++, Java, C, etc.) Basic knowledge in object-oriented programming (OOP) |
| Module objectives: | <ul style="list-style-type: none"> • Students are familiar with different software process models. • Students are able to classify different aspects of software-related process activities and can recognize the importance of the roles of the parties involved into these processes. • Students are able to derive the software specifications from the requirements of a software project. • Students are familiar with different UML diagrams • Students can develop system model of a software project using graphical modelling (UML) • Students can develop test procedures for software projects. • Students can develop software using reusable software development technique, e.g. using open source libraries • Students can apply some of design pattern techniques • Students can use software repository system for daily purpose, e.g. revision system for a software project |

| | |
|-----------------|---|
| Content: | <ul style="list-style-type: none"> • Software processes <ul style="list-style-type: none"> - Software process models (Waterfall model, incremental model, reuse-oriented software design) - Process activities (Specification, Design and implementation, Verification, Software evolution) - Coping with change • Agile Development • Requirements Engineering <ul style="list-style-type: none"> - Functional and non-functional requirements - Requirements specification - Requirements management • Design and Implementation • Design Patterns • Reusable Software Development Technique • System Modelling <ul style="list-style-type: none"> - Graphical Modelling perspectives (external, interaction, structural and behavioural) - Unified Modelling Language / UML diagrams (activity, use case, sequence, class and state) • Software testing • Software development tools |
| Assessment: | Graded: Continuous assessment (10%: project and quizzes) and written examination (90%) |
| Forms of media: | Whiteboard, PowerPoint, Projector, PC-Pool |

3401 Heat Transfer

| | |
|----------------------------|--|
| Module name: | Heat Transfer |
| Module code: | 3401 |
| Semester: | Winterterm |
| Module coordinator: | Prof. Dr.-Ing. Joachim Gebel |
| Lecturer: | Prof. Dr.-Ing. Joachim Gebel |
| Language: | English |
| Place in curriculum: | Core subject |
| Timetabled hours: | Lectures: 2 HPW Exercise: 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation |
| Credits: | 5 |
| Recommended prerequisites: | Fundamentals of Thermodynamics Fundamentals of Fluid Mechanics |
| Module objectives: | <p>On completion of this module the student will be able to:</p> <ul style="list-style-type: none"> • explain the scientific principles underlying conduction and convection and determine heat transfer coefficients for both conduction and convection processes; • analyse and solve practical problems related to conduction, forced convection, free convection and convection with phase change (boiling and condensation); • analyse the thermal performance of heat exchangers and recognise and evaluate the conflicting requirements of heat transfer optimisation and pressure drop minimisation; • design or select a heat exchanger to perform a predetermined task; • recognise basic laboratory procedures and safety and conduct laboratory experiments as a group. |
| Content: | <p>1 Review on thermodynamics</p> <p>1.1 First law of thermodynamics 1.2 Second law of thermodynamics 1.3 Efficiency of heat engines</p> <p>2 Conduction</p> <p>2.1 One-dimensional, steady state conduction 2.2 Two-dimensional, steady state conduction 2.3 Transient conduction</p> |

| | |
|-----------------|---|
| | <p>3 Convection</p> <p>3.1 Forced convection 3.2 Free convection</p> <p>4 Boiling and condensation</p> <p>5 Heat exchangers</p> <p>5.1 Overall heat transfer coefficient 5.2 Heat exchanger analysis - Log Mean Temperature Difference - NTU-Method 5.3 Heat exchanger types and heat exchanger design</p> <p>6 Practical Training</p> <p>6.1 Determination of overall heat transfer coefficient of different heat exchanger types 6.2 Comparison of plate heat exchanger, tubular heat exchanger, shell and tube heat exchanger, finned cross-flow heat exchanger, and stirred tank with double jacket and coiled tube</p> |
| Assessment: | Graded: Written digital examination |

3403 Materials Selection and Simulation

| | | |
|----------------------------|--|-------|
| Module name: | Materials Selection and Simulation | |
| Module code: | 3403 | |
| Semester: | Summerterm | |
| Module coordinator: | Prof. Dr.-Ing. Henning Schütte | |
| Lecturer: | Prof. Dr.-Ing. Henning Schütte | |
| Language: | English | |
| Place in curriculum: | Core subject | |
| Timetabled hours: | Lectures: | 2 HPW |
| | Practical Training: | 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation | |
| Credits: | 5 | |
| Recommended prerequisites: | Introductory courses in Material Science, Design and Mechanics | |
| Module objectives: | <p>After completing the course the students are able to:</p> <ul style="list-style-type: none"> • classify materials according to specific applications, e.g. according to specific design codes • understand tools and keys for proper selection of materials for specific applications • detect limits of materials and present proper alternative selection • identify standard procedures and benchmarks for materials classification and selection • apply basic materials property calculations • identify and apply proper simulation models and tools, especially FEM based analysis | |
| Content: | <ul style="list-style-type: none"> • General ideas of materials selection • Methods and procedures • Determination of requirements • Information sources and databases • Evaluation, validation and decision • Risk evaluation and control • Overview and application of modelling approaches simulation methods, FEM based evaluation, risk and failure models • Assessment | |
| Assessment: | Graded: 100% continuous assessment | |

| | |

3407 Computational Multibody Dynamics

| | | |
|----------------------------|--|-------|
| Module name: | Computational Multibody Dynamics | |
| Module code: | 3407 | |
| Semester: | Summerterm | |
| Module coordinator: | Prof. Dr. Thorsten Brandt | |
| Lecturer: | Prof. Dr. Thorsten Brandt | |
| Language: | English | |
| Place in curriculum: | Focus field | |
| Timetabled hours: | Lectures: | 1 HPW |
| | Practical Training: | 2 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation | |
| Credits: | 5 | |
| Recommended prerequisites: | Fundamentals of Mechanics and Engineering Mathematics at the undergraduate level as well as fundamental programming skills | |
| Module objectives: | After successfully finishing the module, students are familiar with the fundamentals of multibody dynamics. They are able to apply concepts from linear algebra such as vectors and matrices to mechanical systems. The kinematics of technical joints such as revolute joints can be modeled by algebraic constraints by the student. The student is also able to model the dynamics of constraint multibody dynamic systems. Furthermore, the student is able to develop basic programming code and to simulate multibody dynamic systems and to interpret the simulation results. | |
| Content: | The course focuses on the modelling and numerical simulation of dynamic multibody systems. Main subjects are: <ul style="list-style-type: none"> • Definitions: bodies, joints, and coordinates • Kinematics: rotation, translation • Kinematic constraints • Dynamics • Development of multibody dynamics simulation code • Application of multibody simulation software • Analysis of multibody dynamic systems | |
| Assessment: | Graded: Written or oral examination | |
| Forms of media: | Whiteboard, PowerPoint, Projector | |
| Literature: | P. E. Nikravesh: Planar Multibody Dynamics - Formulation, Programming, and Application, CRC press,2008 Lecture Notes | |

3408 Factory Simulation

| | | |
|-----------------------------|--|-------|
| Module name: | Factory Simulation | |
| Module code: | 3408 | |
| Courses (where applicable): | | |
| Semester: | Summerterm | |
| Module coordinator: | Prof. Dr.-Ing. Alexander Klein MBA | |
| Lecturer: | Christian Berendonk | |
| Language: | English | |
| Place in curriculum: | Focus Field | |
| Timetabled hours: | Lectures: | 2 HPW |
| | Tutorials: | 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation | |
| Credits: | 5 | |
| Recommended prerequisites: | | |
| Module objectives: | <p>After completing the course the students are able to:</p> <ul style="list-style-type: none"> • Understand the benefits and areas of use of discrete-event factory simulation (material flow simulation) • Transform a factory-related problem (question) from prose into a precise question that can be answered by using the factory simulation methods • Create models, write methods (codes, rules) • Analyse results and draw conclusions | |
| Content: | <ul style="list-style-type: none"> • Basics about simulation • Difference between DE method, agent-based simulation and system dynamics approach • Difference between static calculation of production capacity and cost and dynamic simulation • Problem examples • Practical use of a factory simulation tool along the above-mentioned module objectives | |
| Assessment: | Graded: Continuous assessment | |
| Forms of media: | Whiteboard, PowerPoint, Projector, Computer lab | |
| Literature: | <ul style="list-style-type: none"> • Lecture notes • Tutorials Siemens plant simulation and forums • Tutorials Simul8 and forums • Steffen Bangsoff or similar book (translated extracts) | |

3404 Advanced CAD

| | |
|-----------------------------|---|
| Module name: | Advanced Computer-Aided Design |
| Module code: | 3404 |
| Courses (where applicable): | |
| Semester: | Winterterm |
| Module coordinator: | Prof. Dr.-Ing. Stéphane Danjou |
| Lecturer: | Prof. Dr.-Ing. Stéphane Danjou |
| Language: | English |
| Place in curriculum: | Elective Focus Field "Digital Engineering" Elective Focus Field "Development and Design" |
| Timetabled hours: | Lecture: 1 HPW Practical Training: 2 HPW |
| Workload: | 45 h attendance 70 h preparation and review 35 h exam preparation |
| Credits: | 5 |
| Recommended prerequisites: | Basic knowledge in a CAD system from previous studies, ideally in SolidWorks |
| Module objectives: | <p>This course provides students with knowledge of advanced Computer-aided Design techniques to realise, communicate and share mechanical design information, and equips them with the necessary skills for using the CAD system SolidWorks to carry out these tasks efficiently.</p> <p>After completion of the module students are able to generate complex solid models and assemblies, and they are able to modify and update an existing design. They understand the different 3D modelling methodologies and can apply the appropriate modelling strategy for different applications. In addition, students are able to generate surface models with the help of different types of faces and curves. They can select the right surface construction technique for a given geometry. Beside advanced modelling techniques, students are able to integrate calculations into a CAD model and know different techniques to ensure the design intent and how to automate modelling steps.</p> <p>Students understand the concept of Product Lifecycle Management and how CAD is related to this, and students know the principles of Product Data Management systems and how CAD files are organized inside companies.</p> |
| Content: | <ul style="list-style-type: none"> • Solid representation schemes in CAD systems • Advanced sweep features • Advanced loft features |

| | |
|-----------------|--|
| | <ul style="list-style-type: none"> • Advanced surface modelling <ul style="list-style-type: none"> - Ruled surfaces - Lofted surfaces - Swept surfaces - Filled surfaces - Boundary and freeform surfaces • Hybrid modelling (combined solid/surface modelling) • Modelling methodologies <ul style="list-style-type: none"> - Top-down assembly modelling - Bottom-up assembly modelling - Design in context approach - External referencing in CAD systems - Model Based Definition in CAD systems • Knowledge-based Engineering techniques • Automation techniques for 3D CAD modelling tasks • Methods and systems for Product Lifecycle Management (PLM) • Fundamental functionality of Product Data Management (PDM) systems and their applications • PDM systems for vaulting and version control of engineering data |
| Assessment: | Graded: Written digital examination |

3405 Computational Fluid Dynamics

| | |
|----------------------------|--|
| Module name: | Computational Fluid Dynamics |
| Module code: | 3405 |
| Semester: | Winter term |
| Module coordinator: | Prof. Dr.-Ing. Joachim Gebel |
| Lecturer: | Jan Lehmkuhl (external lecturer) |
| Language: | English |
| Place in curriculum: | Focus field subject |
| Timetabled hours: | Lectures: 1 HPW Exercise: 2 HPW |
| Workload: | 60 h attendance 90 h preparation and review |
| Credits: | 5 |
| Recommended prerequisites: | Advanced Engineering Mathematics 3301 Numerical Methods for Simulation 3411 Thermodynamics of Power Systems 3401 Heat Transfer 3402 Principles of Software Development 3404 Advanced CAD |
| Module objectives: | On completion of this module the student will be able to <ul style="list-style-type: none"> • run CFD calculations with open-source tools and version control. This contains <ul style="list-style-type: none"> ○ to create a mesh ○ to setup a calculation ○ to run a calculation ○ to post-process a CFD simulation to extract the needed information • understand the basic concept of <ul style="list-style-type: none"> ○ Navier-Stokes equation ○ Incompressible and compressible fluid flow applications ○ Convergence behaviour in CFD ○ Steady state and transient flow behaviour and their impacts to the simulation ○ Turbulence modelling ○ errors and uncertainties in CFD • create a CFD project and <ul style="list-style-type: none"> ○ to pose appropriate questions |

| | |
|-----------------|---|
| | <ul style="list-style-type: none"> ○ to chase the problem ○ to write an appropriate report |
| Content: | <p>The main focus of this introduction module is to enable the student to run a successful CFD project.</p> <p>To achieve this goal the student needs three major skills, which are addressed in this course and described in more detail in the objectives.</p> <ol style="list-style-type: none"> 1. Practical skills to run a CFD calculation 2. Understanding of some basic theory to formulate right statements 3. Project management skills to achieve goals and not to run impressive but useless simulations <p>The used toolset in this course is complete open-source and available on all three major operating systems (Linux, Windows, MacOS). Therefore everyone should be able run small simulations on their private computers, which is necessary for the course. The used tools are:</p> <ul style="list-style-type: none"> • "git" as version control system (git-scm.com/) • "Visual Studio Code" as editor (https://code.visualstudio.com) • "FreeCAD" as CAD solution (https://freecadweb.org/) • "CfdOF-FreeCAD-Plugin" as graphical CFD preprocessor (https://github.com/jaheyne/CfdOF) • "OpenFOAM" as CFD solver (https://openfoam.org/) • "ParaView" as postprocessor (https://www.paraview.org/) |
| Assessment: | <p>Graded: 50% continuous assessment, i.e. finishing tutorial problems at home and presenting them in class</p> <p>50% final project work and calculation report</p> |
| Forms of media: | Webex/Moodle |

3406 Model Based Design of Mechatronic System

| | | |
|----------------------|--|-------|
| Module name: | Model Based Design of Mechatronic Systems | |
| Module code: | 3406 | |
| Semester: | Winterterm | |
| Module coordinator: | Prof. Dr.-Ing. Dirk Nissing | |
| Lecturer: | Prof. Dr.-Ing. Dirk Nissing | |
| Language: | English | |
| Place in curriculum: | Elective Focus Field "Digital Engineering" Core Field "Development and Design" | |
| Timetabled hours: | Lecture: | 1 HPW |
| | Practical Training: | 2 HPW |
| Workload: | 45 h attendance 80 h preparation and review 25 h exam preparation | |
| Credits: | 5 | |
| Prerequisites: | | |
| Module objectives: | <p>After completion of the module students are able to differentiate between various modelling techniques, such as white box and black box modelling, and they are able to decide for a modelling technique based on given requirements.</p> <p>Students are able to apply the method of decomposition for complex system structures, dividing them into sub-modules, which allows modelling and simulations in bigger teams. They understand the principles, approaches and methods of theoretical modelling and experimental modelling (system identification). They have the knowledge of using and implementing the "System Identification" method by considering a practical example. Furthermore, the basics to specify the IT-part of a complex system are introduced. This contains database interface, App-design and IT security.</p> <p>Ultimately, students are able to interpret, evaluate and assess the simulation results and models and they have the experience and knowledge to identify and develop required changes of the model.</p> | |
| Content: | <ul style="list-style-type: none"> • Modelling <ul style="list-style-type: none"> - Theoretical modelling - Experimental modelling • Principles of decomposition of a complex system / problem (V-model) <ul style="list-style-type: none"> - Decomposition into sub-modules - Interface definition - Assignment of simulation tasks - Integration of simulation modules | |

| | |
|-----------------|---|
| | <ul style="list-style-type: none"> - Synthesis of simulated system • Simulation of electric power transmission drive <ul style="list-style-type: none"> - Electric motor - Parameterization - Investigation of disturbances - Model verification - Extension of the model • Identification with parametric models <ul style="list-style-type: none"> - Least square parameter estimation - Implementation of a real problem: system identification, system validation and verification • IT-interfaces |

| Module name: | Design Methodology |
| Module code: | 3409 |
| Semester: | Winterterm |
| Module coordinator: | Prof. Dr.-Ing. P. Kisters |
| Lecturer: | Prof. Dr.-Ing. R. Schmetz |
| Language: | English |
| Place in curriculum: | Compulsory optional subject: Design & Development |
| Timetabled hours: | Lectures: 2 HPW Exercise: 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation |
| Credits: | 5 |
| Recommended prerequisites: | |
| Module objectives: | <p>The module introduces modern techniques and methods for product development based on the German guideline VDI 2221. After completing the module, the students know different methods to analyse, solve and control design problems. The students are aware of common obstacles in the design process and they now way how to overcome problems during the design phase. They realize the importance of the early phase of a design process. The students are familiar with simultaneous and virtual product design approaches. Besides, they are able to optimize solution based on methodical analysis of designs and improve the product architecture. They how to come to decisions and how to evaluate them. Hence, the students are prepared to take over a responsible position in a design development process.</p> |
| Content: | <ul style="list-style-type: none"> • Introduction of design methodologies for different engineering fields • Strategic planning of a product design process • Methods for Product Development <ul style="list-style-type: none"> - Analysis tools for minimum design - Work with technical-physical principle solutions - Expert system for the improvement of energy efficiency • Design for X <ul style="list-style-type: none"> - Impact of different design targets on design and process • Portfolio management <ul style="list-style-type: none"> - Risk and Change Management - Modular Design - Platform strategies |

3410 Tribology

| | |
|----------------------------|--|
| Module name: | Tribology |
| Module code: | 3410 |
| Semester: | Summerterm |
| Module coordinator: | Prof. Dr.-Ing. Peter Kisters |
| Lecturer: | Prof. Dr.-Ing. Peter Kisters Karsten Schacky |
| Language: | English |
| Place in curriculum: | Compulsory optional subject: Design & Development |
| Timetabled hours: | Lectures: 2 HPW Practical Training: 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation |
| Credits: | 5 |
| Recommended prerequisites: | |
| Module objectives: | <p>After passing the course the students are able to communicate about tribological phenomena. They identify tribo systems and understand basic mechanisms. The students differentiate between different types of friction and wear. They are aware of the importance of lubrication for the tribological system and distinguish between different kinds of lubricants and their influences on friction and wear. The students know different options for surface modification and their influence on the tribological system. After description of a given tribologically stressed system the students are able to analyse it and know how they can find root causes for existing wear problems. Based on that they develop and evaluate countermeasures against wear and tear by surface modification. Besides, the students are able to analyse the influence of wear and tear on the function of a product as well as ecological impacts.</p> <p>Some wear mechanisms require basic knowledge about fluid dynamics to explain the influence on machine components. Therefore, hydrostatic and hydrodynamic bearings will be introduced and discussed.</p> <p>After taking part in the practical trainings the students are able to describe engineering surfaces and know test methods to determine results for friction coefficients and wear rates under realistic load conditions. The students are able to run the required tests.</p> |

3404 Advanced CAD

| | | |
|-----------------------------|---|-------|
| Module name: | Advanced Computer-Aided Design | |
| Module code: | 3404 | |
| Courses (where applicable): | | |
| Semester: | Winterterm | |
| Module coordinator: | Prof. Dr.-Ing. Stéphane Danjou | |
| Lecturer: | Prof. Dr.-Ing. Stéphane Danjou | |
| Language: | English | |
| Place in curriculum: | Elective Focus Field "Digital Engineering" Elective Focus Field "Development and Design" | |
| Timetabled hours: | Lecture: | 1 HPW |
| | Practical Training: | 2 HPW |
| Workload: | 45 h attendance 70 h preparation and review 35 h exam preparation | |
| Credits: | 5 | |
| Recommended prerequisites: | Basic knowledge in a CAD system from previous studies, ideally in SolidWorks | |
| Module objectives: | <p>This course provides students with knowledge of advanced Computer-aided Design techniques to realise, communicate and share mechanical design information, and equips them with the necessary skills for using the CAD system SolidWorks to carry out these tasks efficiently.</p> <p>After completion of the module students are able to generate complex solid models and assemblies, and they are able to modify and update an existing design. They understand the different 3D modelling methodologies and can apply the appropriate modelling strategy for different applications. In addition, students are able to generate surface models with the help of different types of faces and curves. They can select the right surface construction technique for a given geometry. Beside advanced modelling techniques, students are able to integrate calculations into a CAD model and know different techniques to ensure the design intent and how to automate modelling steps.</p> <p>Students understand the concept of Product Lifecycle Management and how CAD is related to this, and students know the principles of Product Data Management systems and how CAD files are organized inside companies.</p> | |
| Content: | <ul style="list-style-type: none"> • Solid representation schemes in CAD systems • Advanced sweep features • Advanced loft features | |

Focus Field Production

3402 Principles of Software Development

| | |
|-----------------------------|---|
| Module name: | Principles of Software Development |
| Module code: | 3402 |
| Courses (where applicable): | |
| Semester: | Summerterm |
| Module coordinator: | Prof. Dr. Ronny Hartanto |
| Lecturer: | Prof. Dr. Ronny Hartanto |
| Language: | English |
| Place in curriculum: | Focus Core subject |
| Timetabled hours: | Principles of Software Development Lectures: 2 HPW Practical: 1 HPW |
| Workload: | 45 h attendance 45 h preparation and review 30 h homework and lab review 30 h exam preparation |
| Credits: | 5 |
| Recommended prerequisites: | Good knowledge in programming (C++, Java, C, etc.) Basic knowledge in object-oriented programming (OOP) |
| Module objectives: | <ul style="list-style-type: none"> • Students are familiar with different software process models. • Students are able to classify different aspects of software-related process activities and can recognize the importance of the roles of the parties involved into these processes. • Students are able to derive the software specifications from the requirements of a software project. • Students are familiar with different UML diagrams • Students can develop system model of a software project using graphical modelling (UML) • Students can develop test procedures for software projects. • Students can develop software using reusable software development technique, e.g. using open source libraries • Students can apply some of design pattern techniques • Students can use software repository system for daily purpose, e.g. revision system for a software project |
| Content: | <ul style="list-style-type: none"> • Software processes |

| | |
|-----------------|---|
| | <ul style="list-style-type: none"> - Software process models (Waterfall model, incremental model, reuse-oriented software design) - Process activities (Specification, Design and implementation, Verification, Software evolution) - Coping with change • Agile Development • Requirements Engineering <ul style="list-style-type: none"> - Functional and non-functional requirements - Requirements specification - Requirements management • Design and Implementation • Design Patterns • Reusable Software Development Technique • System Modelling <ul style="list-style-type: none"> - Graphical Modelling perspectives (external, interaction, structural and behavioural) - Unified Modelling Language / UML diagrams (activity, use case, sequence, class and state) • Software testing • Software development tools |
| Assessment: | Graded: Continuous assessment (10%: project and quizzes) and written examination (90%) |
| Forms of media: | Whiteboard, PowerPoint, Projector, PC-Pool |
| Literature: | <p>I. Sommerville, "Software Engineering". 10th edition. Pearson 2016</p> <p>J. Rumbaugh, I. Jacobson, G. Booch, "The Unified Modeling Language Reference Manual", 2nd edition. 3608 Sustainability

| | |
|----------------------------|---|
| Module name: | Sustainability |
| Module code: | 3608 |
| Semester: | Winterterm |
| Module coordinator: | Prof. Dr.-Ing. Raimund Sicking |
| Lecturer: | Prof. Dr.-Ing. Raimund Sicking |
| Language: | English |
| Place in curriculum: | Core Subject |
| Timetabled hours: | Lecture: 2 SWS Exercises: 1 SWS |
| Workload: | 45 h attendance 30 h preparation of presentation(s) 75 h self study and exam preparation |
| Credits: | 5 |
| Recommended prerequisites: | none |
| Module objectives: | <p>After completing the course, students</p> <ul style="list-style-type: none"> • understand the general interdependencies between human beings, technology and nature. • can distinguish between different dimensions of globalization. • are aware of global environmental changes, such as climate change. • have fundamental knowledge about sustainability concepts, strategies and areas of activity. • understand concept and principle of a circular economy. • know EU-directives and selected national regulations concerning circular economy and waste • know options for product and product integrated environment protection • recognize concept and structure of different life cycle assessments. • are able to apply methods for sustainable technology design. • Know methods for pollution-free environment |
| Content: | <ul style="list-style-type: none"> • Theories of nature, society and technology • Economic, political, cultural and ecological dimension of globalization • Global warming, carbon footprint, decarbonization |

| | |
|-----------------|--|
| | <ul style="list-style-type: none"> • Weak and strong sustainability • The <i>factor 10</i> approach • Concept of <ul style="list-style-type: none"> - dematerialization - open loop - low carbon - restoration • Concept and principle of a circular economy • Basics of product and product-integrated environmental protection • Technology assessment • Social, ecological and classic life cycle assessment (LCA) • Low impact materials, renewable resources, energy efficiency, design for reuse and recycling • Handling harmful substances • Methods for pollution-free environment |
| Assessment: | Graded: Examination + Group Presentation |
| Forms of media: | Webex/Moodle |
| Literature: | <p><i>Matthias Bank:</i> Basiswissen Umwelttechnik: Wasser, Luft, Abfall, Lärm und Umweltrecht</p> <p><i>Karl Schwister:</i> Taschenbuch der Umwelttechnik</p> <p><i>Ernst Worell, Markus A. Reuter (Ed.):</i> Handbook of Recycling</p> <p><i>Iris Pufé</i> Nachhaltigkeit</p> <ul style="list-style-type: none"> - Course materials from the lecturer - Exercises from the lecturer - Lecture notes compiled by class (open source) |

3408 Factory Simulation

| | | |
|-----------------------------|--|-------|
| Module name: | Factory Simulation | |
| Module code: | 3408 | |
| Courses (where applicable): | | |
| Semester: | Summerterm | |
| Module coordinator: | Prof. Dr.-Ing. Alexander Klein MBA | |
| Lecturer: | Christian Berendonk | |
| Language: | English | |
| Place in curriculum: | | |
| Timetabled hours: | Lectures: | 2 HPW |
| | Tutorials: | 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation | |
| Credits: | 5 | |
| Recommended prerequisites: | | |
| Module objectives: | <p>After completing the course the students are able to:</p> <ul style="list-style-type: none"> • Understand the benefits and areas of use of discrete-event factory simulation (material flow simulation) • Transform a factory-related problem (question) from prose into a precise question that can be answered by using the factory simulation methods • Create models, write methods (codes, rules) • Analyse results and draw conclusions | |
| Content: | <ul style="list-style-type: none"> • Basics about simulation • Difference between DE method, agent-based simulation and system dynamics approach • Difference between static calculation of production capacity and cost and dynamic simulation • Problem examples • Practical use of a factory simulation tool along the above-mentioned module objectives | |
| Assessment: | Graded: Continuous assessment | |
| Forms of media: | Whiteboard, PowerPoint, Projector, Computer lab | |
| Literature: | <ul style="list-style-type: none"> • Lecture notes • Tutorials Siemens plant simulation and forums • Tutorials Simul8 and forums • Steffen Bangsoff or similar book (translated extracts) | |

3415 Production Management

| | |
|----------------------------|---|
| Module name: | Production Management |
| Module code: | 3415 |
| Semester: | Summerterm |
| Module coordinator: | Prof. Dr.-Ing. Alexander Klein MBA |
| Lecturer: | external lecturer |
| Language: | English |
| Place in curriculum: | |
| Timetabled hours: | Lectures: 2 HPW Exercises: 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation |
| Credits: | 5 |
| Recommended prerequisites: | |
| Module objectives: | <p>After completing the course the students are able to identify specific actions to optimize existing factories and to design new factories with regard to good KPI such as productivity, ROCE, throughput time, delivery performance etc.</p> <p>The understand the importance of IT in modern production due to high number of variants, batch tracking, , short time to market and shorter product life cycles and strong competition in many areas.</p> <p>The students are able to design production networks, i.e. to distribute value creation over several production facilities in such a way that the network is optimized with regard to a specific target, a mixed objective and with compliance of boundary conditions.</p> |
| Content: | <ul style="list-style-type: none"> □ Factory design - Factory layout - Factory sub functions (including warehouses) - Capacity calculation - Flexible and versatile factories - Conveying technology - Cost forecasting and investment planning - Technology selection - Ergonomics and workplace design - Order management - ERP enterprise resource planning - work planning |

| | |
|------------------------|--|
| | <ul style="list-style-type: none"> - production logistics and priority rules - performance metrics (KPI) □ Lean production - value stream mapping & value stream design □ Complexity management - impact of product design on complexity in production - internal and external complexity □ Dilemmas in production (target conflicts) and means to reduce them - Industrial IoT (digital transformation, “Industrie 4.0”) |
| <p>Assessment:</p> | <p>Graded: Continuous assessment</p> |
| <p>Forms of media:</p> | <p>Whiteboard, PowerPoint, Projector</p> |
| <p>Literature:</p> | <ul style="list-style-type: none"> • Lecture notes • E. S. POUND, M. L. SPEARMAN: Factory physics for managers (McGraw Hill) • Whitepapers |

3416 Machine Tools and Automation

| | |
|----------------------------|--|
| Module name: | Machine Tools and Automation |
| Module code: | 3416 |
| Semester: | Winterterm |
| Module coordinator: | Prof. Dr.-Ing. Alexander Klein MBA |
| Lecturer: | Prof. Dr.-Ing. D. Manoharan (external lecturer) |
| Language: | English |
| Place in curriculum: | |
| Timetabled hours: | Lectures: 2 HPW Practical Training: 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation |
| Credits: | 5 |
| Recommended prerequisites: | Manufacturing technology, controls, mechanics (elastostatics), technical design at undergraduate level |
| Module objectives: | <p>After completing the course the students are able to:</p> <ul style="list-style-type: none"> distinguish the types of machine tools, know their field of application and their functionality, understand the factors that influence the design and the performance of a machine tool, understand the standard methods and apply them to evaluate the machine tool's performance, select the proper machine tool and its grade of automation, understand the management of machine tools in the floor shop, comprehend the impact of industry 4.0. |
| Content: | <p>Machine tool classification, types and concepts:</p> <ul style="list-style-type: none"> machining, deforming, thermal cutting, hybrid etc. configuration concepts (position of axes, kinematics) visual inspection of machine tools (laboratory) <p>Machine tool components:</p> <ul style="list-style-type: none"> structure (bed, guideways, housings, headstock, tailstock etc.) feed drives spindle drives tool sensors and encoders (e.g. position and speed) visual identification of the components (laboratory) <p>Machine tool dynamics:</p> <ul style="list-style-type: none"> static stiffness dynamic stiffness, eigenfrequencies and eigenmodes |

| | |
|------------------------|---|
| | <ul style="list-style-type: none"> • regenerative chatter and other instabilities • active and passive methods to reduce instability • measurement of force, stiffness and instability (laboratory) <p>Thermal behaviour:</p> <ul style="list-style-type: none"> • thermal growth and resulting inaccuracy • Thermal compensation and thermally neutral design <p>Accuracy:</p> <ul style="list-style-type: none"> • repeat accuracy • structural influences (guideways, spindles, backlash bearings etc.) • controls influence (axis lag) • positioning error and ISO standards • positioning test and correction (laboratory) <p>Controls:</p> <ul style="list-style-type: none"> • NC • PLC • safety concept and components • control loops (position, speed, acceleration, jolt control) • adaptive process control <p>Automation:</p> <ul style="list-style-type: none"> • systems for tool handling (e.g. tool magazine, tool correction,...) • systems for workpiece handling (e.g. workpiece changer, pallet changer, conveyor for multiple machines,...) • Machine tools for flexible manufacturing systems <p>Industry 4.0:</p> <ul style="list-style-type: none"> • concept and applications • hardware solutions and software platforms • influence in the design (modifications, simulations,...) • business impact (productivity, revamping, ...) |
| <p>Assessment:</p> | <p>Graded: Written Exam and/or reports</p> |
| <p>Forms of media:</p> | <p>Webex/Moodle</p> |
| <p>Literature:</p> | <ul style="list-style-type: none"> • Lecture notes • Makhanov, Stanislav S., Anotaipaiboon, Weerachai: Advanced numerical methods to optimize cutting operations of five axis milling machines, Springer, 2007 • Kibbe, Richard R.: Machine tool practices, Pearson 2010 • Schmitz, Tony L., Smith, Kevin S.: Mechanical vibrations - modeling and measurement, Springer 2012 • Cheng, Kai: Machining dynamics - fundamentals, applications and practices, Springer, 2009 • Weck, Manfred; Brecher, Christian: Werkzeugmaschinen – Fertigungssysteme (1-5), Springer, 2006 |

3417 Manufacturing Technology Development

| | | |
|----------------------------|--|-------|
| Module name: | Manufacturing Technology Development | |
| Module code: | 3417 | |
| Semester: | Winterterm | |
| Module coordinator: | Prof. Dr.-Ing. Alexander Klein | |
| Lecturer: | T. Oster (External Lecturer) | |
| Language: | English | |
| Place in curriculum: | | |
| Timetabled hours: | Lectures: | 2 HPW |
| | Exercises: | 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation | |
| Credits: | 5 | |
| Recommended prerequisites: | | |
| Module objectives: | After completing the course the students are able to: <ul style="list-style-type: none"> • Understand why and how to improve existing technologies and or develop new technologies • Create process models to reduce complexity and make the problem solvable • Make good technology decisions and determine the value of different options | |
| Content: | <ul style="list-style-type: none"> • Definition of targets in development of new manufacturing technologies and enhancement of existing technologies • Creation of visions • Forms of cooperation with research facilities, business partners etc. • Determination of the value of a technology (and strategic impact) & the Gassmann technology portfolio • IP protection of manufacturing technologies • Advantages and disadvantages of physical experiments (experimental studies) (ditto for simulation studies) • Design of Experiment (DoE) for physical experiments and for simulation runs • Model validation and calibration | |
| Assessment: | Graded: Continuous assessment | |
| Forms of media: | Webex/Moodle | |
| Literature: | <ul style="list-style-type: none"> • Lecture notes | |

3418 Data Analytics

| | |
|----------------------------|--|
| Module name: | Data Analytics |
| Module code: | 3418 |
| Semester: | Winterterm |
| Module coordinator: | Prof. Dr. Alexander Struck |
| Lecturer: | Prof. Dr. Alexander Struck |
| Language: | English |
| Place in curriculum: | |
| Timetabled hours: | Lecture: 2 HPW Practical Training: 1 HPW |
| Workload: | 45 h attendance 75 h preparation and review 30 h exam preparation |
| Credits: | 5 |
| Recommended prerequisites: | Mathematics (BSc. level), Programming |
| Module objectives: | <p>Students understand the concepts of data science and get insight on how to evaluate and apply information technology and data-driven decision making into production processes and other fields of mechanical engineering</p> <p>They acquire basic skills on data categories, methods of data processing and various types of analysis. Basic ideas of machine learning will be discussed and applied to relevant problems in engineering</p> <p>Students can evaluate appropriate hardware, software and methods to implement data analytics into business cases.</p> |
| Content: | <ul style="list-style-type: none"> • Types of data, Big Data • Tools of data analytics: Matlab, Python, R • Hardware and software requirements for Big Data • Data selection and acquisition • Descriptive and exploratory data analysis of quantitative and qualitative data • Machine learning overview: Supervised vs unsupervised learning, case studies, applications • Added value concepts in business Discussion and decision making arguments, pros and cons of data science projects |
| Assessment: | Graded: written examination |
| Forms of media: | Webex/Moodle |
| Literature: | <p>Further Readings:</p> <ul style="list-style-type: none"> • Chirag Shah, "A Hands-On Introduction to Data Science", Cambridge, 2020 |

3603 Human Machine Interaction

| | | |
|----------------------|---|-------|
| Module name: | Human Machine Interaction | |
| Module code: | 3603 | |
| Semester: | Summerterm | |
| Module coordinator: | Prof. Dr.-Ing. Ivan Volosyak | |
| Lecturer: | Prof. Dr.-Ing. Ivan Volosyak Prof. Dr. Matthias Krauledat | |
| Language: | English | |
| Place in curriculum: | Focus field | |
| Timetabled hours: | Lecture: | 2 HPW |
| | Practical Training: | 1 HPW |
| Workload: | 45 h attendance 65 h preparation and review 40 h exam preparation | |
| Credits: | 5 | |
| Prerequisites: | | |
| Module objectives: | <p>The field of Human-Computer Interaction (HCI) is rapidly growing area of human-machine interaction. This highly multidisciplinary study course brings together research topics from: Interaction Design, Human-Robot Interaction, Artificial Intelligence, Psychology, Robotics and many other fields. The main goal of HCI is to enable machines to successfully interact with humans.</p> <p>The students understand the fundamentals of underlying technologies, as they relate to human-computer interaction, man-machine coupling, and ethics. The electrical potentials in the human brain, which can be detected with non-invasive and invasive methods, may be used for the establishing the connection between the human brain and the computer.</p> <p>The students can derive, from first principles, real architectures for modern Brain-Computer Interfaces (BCI). They are able to design and build, using specialized communications structures and sensors, systems for, among other things, the support of physically handicapped individuals (such as gesture recognition, speech processing etc.). They appreciate the safety and social aspects of modern HCI and BCI technologies and can name the relevant risks</p> | |
| Content: | <ul style="list-style-type: none"> • Introduction to Human-Machine Interaction • Human body as electrical system • The concept of a Brain-Computer Interface • Modern speech processing | |

| | |
|-----------------|--|
| | <ul style="list-style-type: none"> • Gesture recognition • Virtual and Augmented Reality • Data collection with non-invasive methods • Fundamentals of EEG • SSVEP, P300 and ERD/ERS based BCI • Applications for communication with and control of external machines |
| Assessment: | Attestation |
| Forms of media: | Whiteboard, PowerPoint, Projector, Demonstrations in the lecture |
| Literature: | <ul style="list-style-type: none"> • Ian McLoughlin, Applied Speech And Audio Processing: With Matlab Examples, Cambridge University Press, 2009, 00/YGK 2 • J. R. Parker, Algorithms for image processing and computer vision, 2011, Wiley, 00/TVV 51 • Jonathan R. Wolpaw, Elizabeth W. Wolpaw Brain-Computer Interfaces – Principles and Practice, Oxford University Press, 2012, 00/TVU33 <p><i>Further reading:</i></p> <ul style="list-style-type: none"> • Siuly Siuly, Yan Li, Yanchung Zhang EEG Signal Analysis and Classification, Springer, 2016, 00/WBK105 • Rajesh P. N. Rao Brain-Computer Interfacing, Cambridge University Press, 2013, 00/WBK78 • Course materials from the lecturer |

Final Semester

3303 Applied Research Project - ARP

| | |
|----------------------------|---|
| Module name: | Applied Research Project - ARP |
| Module code: | 3303 |
| Semester: | Summerterm |
| Module coordinator: | Prof. Prof. Dr. Dirk Nissing Prof. Dr. Alexander Klein Prof. Dr. William Megill Prof. Dr. Ronny Hartanto |
| Lecturer: | Project dependent |
| Language: | English |
| Place in curriculum: | Core Subject |
| Timetabled hours: | none |
| Workload: | 150 h |
| Credits: | 5 |
| Recommended prerequisites: | |
| Module objectives: | The students demonstrate their capability to work independently on an applied research subject in alignment with their course of study, meeting all topical and scientific requirements in a limited period of time. They have the ability to self-analyze and assess the results and make recommendations for improvements. They are able to organize their workflow in order to meet the demands of the problems formulated in their project, as well as to monitor progress and make necessary amendments. Additionally students are able to improve their documentation skills, thus documenting their approach and their results to meet the requirements of a scientific publication. |
| Content: | The project content depends on the chosen topic and is agreed upon with the supervisor. Documentation is granted by an adequately sized description of the topic/problem, the chosen approach, used methods and results. |
| Assessment: | Graded: Written documentation, research results, proceeded data and charts, prototypes, software code, blueprints where applicable. |
| Forms of media: | Raw data, slide deck, written documentation |
| Literature: | |

3304 Master Thesis

| | |
|----------------------------|---|
| Module name: | Master Thesis |
| Module code: | 3304 |
| Semester: | Summerterm |
| Module coordinator: | Prof. Prof. Dr. Dirk Nissing Prof. Dr. Alexander Klein Prof. Dr. William Megill Prof. Dr. Ronny Hartanto |
| Lecturer: | Project dependent |
| Language: | English |
| Place in curriculum: | Core Subject |
| Timetabled hours: | none |
| Workload: | 660 h |
| Credits: | 22 |
| Recommended prerequisites: | At least 50 credit points in the respective courses. Successfully passed "Applied Research Project". |
| Module objectives: | The students demonstrate their capability to work independently on a scientific subject in alignment with their course of study, meeting all topical and scientific requirements in a limited period of time. Scientific methods and approaches are used in order to work on the subject and they have the ability to analyze and assess the results. They are able to organize their workflow in order to meet the demands of the problems formulated in their theses, as well as to monitor progress and make necessary amendments. Additionally students are able to improve their documentation skills, thus documenting their approach and their results to meet the requirements of a scientific publication. |
| Content: | The Thesis content depends on the chosen topic and is agreed upon with the supervisor. Documentation is granted by an adequately sized description of the topic/problem, the chosen approach, used methods and results. |
| Assessment: | Graded: Written thesis |
| Forms of media: | Written thesis |
| Literature: | |

3305 Colloquium

| | |
|----------------------------|--|
| Module name: | Colloquium |
| Module code: | 3305 |
| Semester: | Summerterm |
| Module coordinator: | Prof. Prof. Dr. Dirk Nissing Prof. Dr. Alexander Klein Prof. Dr. William Megill Prof. Dr. Ronny Hartanto |
| Lecturer: | Supervisor of the Master Thesis |
| Language: | English |
| Place in curriculum: | Core Subject |
| Timetabled hours: | none |
| Workload: | 90 h |
| Credits: | 3 |
| Recommended prerequisites: | At least 87 credits |
| Module objectives: | The students are able to defend the results of the Master Thesis place their work in a context of scientific applications and present their results in a proper form for the audience. They motivate their approach and make estimations, how assumptions and simplifications may affect the validity of their results. Additionally, students are able to analyze questions concerning their thesis and results and answer them properly in the context of professional and extra-professional reference. |
| Content: | The content is aligned with the content of the Master Thesis, in addition methodological discussions. |
| Assessment: | Graded: Oral examination |
| Forms of media: | Whiteboard, PowerPoint, Projector, other relevant media |
| Literature: | |
